

SMALL BUSINESS BIG THREAT

COVID-19: CYBERSECURITY TIPS WHILE WORKING REMOTELY

Steps towards making your business secured online!

1

UPDATE YOUR TECHNOLOGY

It is important to ensure all business devices are receiving their appropriate updates.

2

BACKUP YOUR DATA

It is important to ensure you are backing up your data to a different storage device or to a cloud service and to do it daily.

3

USE A VIRTUAL PRIVATE NETWORK (VPN)

Connect to a VPN while accessing business accounts and data, even while on your private Wi-Fi.

4

SECURE YOUR HOME NETWORK

Setup a secondary or guest network for business use only and ensure the password to access this network is different from your personal Wi-Fi network.

5

CHANGE PASSWORDS TO PASSPHRASES

Consider updating your current passwords to longer passphrases.

6

WATCH OUT FOR PHISHING EMAILS

Phishing emails can distribute malware to your devices on your network or they can bring you to fake websites imitating legitimate ones and ask for your username and password.

7

TRAIN & EDUCATE YOUR EMPLOYEES

It is important to understand the risks associated with working remotely. By training and educating your employees and yourself, you can minimize the risks.
