

5 TIPS TO PROTECTING YOUR ONLINE PROFILES:

Tip 1: Use a password manager

These allow for unique passwords for each user account and can create passwords for you.

Tip 2: Use passphrases

Passphrases tend to be longer than passwords and also easier for you to remember.

Tip 3: Delete unused accounts

If you no longer need an account or the information associated with it, minimize your risk of exposure by removing the account.

Tip 4: Enable multi-factor authentication

This allows an extra layer of security to access your accounts.

Tip 5: Look for suspicious activity with your accounts

This can be anything from new device logins, new location logins, changed passwords, missing data, and any other activity you did not do.
