

SOCIAL ENGINEERING ATTACKS TO LOOK OUT FOR

1

Phishing:

Emails that typically ask for confidential information or requiring you to click a link or attachment. This ultimately allows a hacker access to your computer and software.

2

Vishing:

Phone calls that trick the recipient into divulging confidential information.

3

Fake Websites:

Websites made to look like the real deal and trick users into clicking links or entering in their username and passwords.

SMALL BUSINESS
BIG THREAT
